

# The Advanced Evacuation Alert Control and Indicating System

The Advanced evacuation alert panel is designed for total flexibility in supporting the fire and rescue service's chosen evacuation strategy.

- Dedicated fire and rescue service evacuation control system complying with all appearance, functionality and operational requirements of BS-8629:2019
  - Modular construction
  - Quick to install
  - Simple and easy to use
  - Robust, tamper-proof cabinet locked by the fire and rescue service
  - Clearly marked 'EACIE: For Fire and Rescue Service Use Only'
- The layout of controls reflects evacuation alert zones in the building for ease of use and a quick, confident response
- Clear LED indication for rapid status identification
- Slide-in labels and modular switches/LEDs for clear, easy customisation per site
- Approved EN54 components for quality, reliability and peace of mind
- Wired and wireless systems with in-built battery backup
- Latest in microprocessor technology and digital communications for fast operation
- Dedicated access control for service and maintenance using advanced CIE technology
- Specially designed software supports event reporting, service scheduling and customised reports
- Virtual display thanks to the latest Windows-based PC configuration software, for easy testing and commissioning
